Dear Sirs, I am concerned with what the NAB's petition 04-160 is trying to do to XM radio. I urge you to please think about what this will mean to the millions of truck drivers out here that pay for and enjoy this service.

The instant traffic reports are vital in heavy traffic cities to run safely through them. We can dial our radio to the channel we need and hear what is happening without commercials interfering with the information we need "now". Or without having to fiddling with the radio to find a local channel in an area that we don't know.

Nothing is more annoying than to see one of those signs telling you to turn to an AM channel (whatever) for traffic information. Really when was the last time you had a car radio that really picked up AM?

This is a service that we are willing to pay for. Shouldn't that be saying something to the NAB's services?

Thank you for taking the time to read my concerns.
